SUMMARY

Java Backend Developer with 2.5+ years of experience building banking and fintech systems for BIDV, currently serving as Dev Lead. Specialized in payment processing, loan origination, and digital signing, with a strong focus on transaction integrity, system integration, and on-time delivery.

SKILLS

Languages: Java 17/21
Frameworks: Spring Boot, Spring Security, Spring Data JPA (Criteria API), Hibernate
Architecture & Messaging: Microservices, REST API (RESTful), Apache Kafka, WebSocket, Quartz Scheduler
Databases & Caching: SQL, Oracle (PL/SQL), PostgreSQL (Stored Procedures), MySQL, MongoDB, Redis
Cloud & DevOps: AWS fundamentals (S3, Application Load Balancer), Docker, Linux (Ubuntu)
Frontend: Angular (basic)
Testing & Quality: JUnit, Mockito, SonarQube
Tools & Methodologies: Git (GitHub, GitLab), IntelliJ IDEA, Postman, Jira, Agile/Scrum, Waterfall
English: Proficient in reading technical documentation and specifications

WORK EXPERIENCE

Dev Lead | SKYMAP (formerly IGNIFY) (promoted Oct 2025) Apr 2025 - Present

- Led backend development across **6 BIDV projects**, managing up to **4 backend developers** per project within cross-functional teams of **9-18 members** (web, Android, iOS, QC, BA, PM).
- Delivered **6/6 projects on schedule** by driving task breakdown, estimation, and delivery risk management as the main technical point of contact with the client.
- Conducted code reviews and mentored **4 junior developers and 5 interns**.
- Built transaction retry jobs that automatically resolved **~99% of failed transactions**, using idempotency keys to prevent duplicate debits.
- Integrated government systems (State Treasury, General Department of Taxation) and BIDV's eSign platform with HSM-based digital signing via REST APIs.
- Developed independently deployable services in a microservices architecture; wrote SQL, PL/SQL, JPA Criteria queries, and PostgreSQL stored procedures.
- Delivered unit tests with JUnit and Mockito using AI-assisted test generation to meet project-wide code coverage requirements; worked in Agile/Scrum teams using Jira.

Key Projects

- **GOV - Public Service Payment Platform on BIDV Direct**
  Description: Multi-phase platform for paying customs duties, domestic taxes, seaport infrastructure fees, and other State Treasury payments via BIDV Direct (web, iOS, Android), processing **~2,000 transactions/day** with maker-checker approval, reconciliation, and timeout transaction handling.
  Technologies Used: Java 17/21, Spring Boot, Spring Data JPA, Oracle, Apache Kafka, Redis, Quartz, Microservices.
- **RLOS - Retail Loan Origination System for BIDV**
  Description: Loan origination platform covering credit card, collateral, and home loan modules (integrated with BIDV Home), featuring sequential multi-party digital signing of PDF contracts via BIDV's centralized eSign platform and HSM.
  Technologies Used: Java 17/21, Spring Boot, Spring Data JPA, PostgreSQL, REST API, AWS S3.
- **B.ONE - Digital Workplace Platform for BIDV**
  Description: Enterprise-wide internal digital workplace; developed the B.Legal module for legal document management with document relationship mapping, change history, legal consultation Q&A, advanced search, and reporting.
  Technologies Used: Java 17/21, Spring Boot, PostgreSQL (Stored Procedures).
- **Other Projects**
  - **LDH - Lending Hub:** Loan data synchronization and reporting for BIDV's loan management system.
  - **IRM - Integrated Risk Management:** Material risk assessment and residual risk calculation with color-coded severity levels.
  - **CARD - Corporate Card on BIDV Direct:** Backend for corporate card issuance; Angular front-end for card issuance and credit limit change flows.

  Technologies Used: Java, Spring Boot, PostgreSQL, Angular.

Backend Developer | DS GLOBAL Apr 2024 - Apr 2025

- Optimized complex SQL queries through execution plan analysis and indexing, improving performance **up to 10 times**.
- Designed and built a WebSocket load balancing solution with AWS Application Load Balancer, increasing system capacity **at least 5 times**.
- Led a **4-member** Snap# team, achieving on-time delivery and boosting team efficiency **by 20%**.
- Developed secure account management with Spring Security for authentication and authorization across web and mobile platforms.

Key Projects

- **Snap#**
  Description: A photo kiosk system serving customers in Korea and Don Chicken in Vietnam, providing photo printing, centralized kiosk and printer management, user management, analytics tracking, and remote kiosk control via a mobile application.
  Technologies Used: Spring Boot, Spring Security, WebSocket, Scheduling, MySQL, Docker, AWS S3, AWS ALB.
- **LPA**
  Description: A medical clinic management system streamlining patient form creation, customer account management, medical record handling, and secure medical record printing.
  Technologies Used: Spring Boot, Spring Security, MySQL, MongoDB, Docker, Scheduling, Redis.

OTHER EXPERIENCE

Mechanical Engineer | SONG HONG VIET CO., LTD. (SANAKY) Dec 2022 - Feb 2024

- Designed transformer enclosures; transitioned to software development through self-study in Java and Spring Boot.

EDUCATION

Bachelor's degree | Hanoi University of Science and Technology 2017 - 2022

Major: Mechanical Engineering
