Java Backend Developer with over 2 years of experience, including 1 year contributing to enterprise tax payment systems integrated with a major bank. Experienced in developing secure, high-availability, and transaction-sensitive applications ensuring data integrity and compliance. Skilled in Spring Boot, Spring Security, and backend system optimization.

SKILLS

Backend: Java, Apache Kafka

Frameworks: Spring Boot, Hibernate

Cloud & DevOps: AWS at fundamental level, Docker, Linux (Ubuntu)

Version Control: GitHub, GitLab, Fork

Database: Oracle, MySQL, MongoDB, PostgreSQL

Development Tools: Cursor, IntelliJ, Postman

Testing: SonarQube, JUnit, Mockito

Languages: English (Basic)

WORK EXPERIENCES

Back-End Developer | IGNIFY

Apr 2025 - Present

- Work closely with Joint Stock Commercial Bank for Investment and Development of Vietnam (BIDV) on system integration and payment processing.
- Design and developed high-performance APIs using Java Spring Framework.
- Write clean, maintainable, and efficient code following best practices.
- Write and maintained clear technical documentation for APIs, system architecture and system workflows.
- Work closely with Business Analysts to analyze business requirements and translate process workflows into technical solutions.

Key Projects

• **Customs Duty - Public Service module of BIDV Direct** (Link)
Description: Designed and developed a Customs Duty Management System that allows makers to declare and pay customs duties, while checkers verify and approve tax transactions, generate reports, print official receipts, and export tax reports for auditing purposes.
Technologies Used: Spring Boot, Oracle, Quartz, Apache Kafka, Redis.

• **Domestic Tax - Public Service module of BIDV Direct** (Link)
Description: Developed a Domestic Tax Payment System enabling fast, convenient, and reliable payment of land tax, vehicle tax, and other domestic taxes.
Technologies Used: Spring Boot, Oracle, Quartz, Apache Kafka, Redis.

Back-End Developer | DS GLOBAL

Apr 2024 - Apr 2025

- Designed and developed high-performance APIs using Java Spring Framework.
- Designed and optimized database structures for efficient data storage and retrieval.

- Developed secure account management using Spring Security, ensuring proper authentication and authorization for web and mobile platforms.
- Implemented global exception handling with multi-language support.
- Wrote clean, maintainable, and efficient code following best practices.
- Built and optimized SQL queries to improve performance up to 10 times.
- Designed and built a WebSocket load balancer, increasing system scalability at least 5 times.
- Led the Snap# project team, achieving on-time delivery and boosting efficiency by 20%.

Key Projects

• Snap#

Description: A photo kiosk system serving customers in Korea and Don Chicken in Vietnam, providing photo printing, centralized kiosk and printer management, user management, analytics tracking, and remote kiosk control via a mobile application.

Technologies Used: Spring Boot, Spring Security, WebSocket, Scheduling, MySQL, Docker, AWS S3.

• LPA

Description: A medical clinic management system designed to streamline patient form creation, customer account management, medical record handling, and integrate secure and efficient medical record printing functionalities.

Technologies Used: Spring Boot, Spring Security, MySQL, MongoDB, Docker, Scheduling, Redis.

• IMAGEBOX

Description: Contributed to the development of a handheld photo printing system that enables users to connect their mobile devices via Bluetooth and print photos instantly.

Technologies Used: Laravel, MySQL.

EDUCATION

Bachelor's degree | Hanoi University of Science and Technology 2017 - 2022

Major: Mechanical Engineering
